Dear Hiring Team,

After learning about the Data Engineer position, I am excited about the opportunity to deepen my understanding of data engineering processes and contribute to innovative solutions leveraging advanced technologies. The role's focus on handling large datasets, exposure to big data technologies, and the chance to enhance analytics with modern AI tools perfectly matches my career aspirations and technical background.

With over four years of experience as a Data Engineer, I have focused on designing robust data pipelines, machine learning models, and scalable dashboards using SQL, Python, and Power BI. Through roles at Mercedes-Benz Mobility AG and Infosys, I gained practical experience working with international teams and stakeholders, developing solutions that balanced operational needs and data-driven decision-making. For example, I implemented ETL pipelines using Python and SQL at Mercedes-Benz, improving data ingestion speed by 30%, and collaborated with Starbucks teams at Infosys to build 50+ automated pipelines using Apache Spark on Databricks, optimizing data processing for large datasets.

I am particularly motivated by the opportunity to work in this role, where I can apply my analytical skills and technical expertise in SQL, Python, and data warehousing (e.g., Azure, Databricks) to manage datasets ranging from hundreds of GBs to TBs, including tabular, geo-spatial, and behavioral data. My hands-on experience with data orchestration tools like Apache Airflow, familiarity with LLM AI tools (e.g., OpenAI APIs) align with your requirements. Holding an MSc in Data Analytics & Decision Science from RWTH Aachen University, I bring a solid foundation in computer science principles, data structures, algorithms, and statistics, complemented by my freelance project developing an AI-powered market intelligence tool using Flask and MongoDB.

What excites me most about this position is the opportunity to work with cutting-edge technologies like Terraform, Kubernetes, and big data platforms in a dynamic environment, allowing me to explore different facets of data engineering and tailor my contributions. I am eager to contribute my proactive mindset, communication skills, and passion for data engineering to support your goals of advancing analytics and digital innovation. I am willing to relocate to join your dynamic team.

Thank you for considering my application. I look forward to discussing how I can contribute to your data engineering initiatives.

Warm regards,

Nallaperumal Krishnan
