Dear Hiring Team at Aldi Nord,

I am excited to apply for the Data Analyst position at ALDI Nord Group, as advertised on the website. With my strong background in data analysis, business intelligence, and bridging business needs with technical solutions, I am eager to contribute to ALDI's mission of delivering quality products at low prices through data-driven insights.

I have completed my bachelor's degree in Computer Science and I recently completed my master's degree in Data Analytics, focusing on software development, machine learning, and scalable AI solutions. In my previous roles at Mercedes-Benz Mobility and Infosys, I have acted as a key liaison between business stakeholders and IT teams, deriving requirements and developing data models that support complex business processes. For instance, while working with the BI team for Starbucks USA at Infosys, I analysed customer data to uncover insights that informed personalized campaigns, enhancing engagement and driving measurable results.

My proficiency in SQL and Python has enabled me to build optimized queries, automate data pipelines, and create impactful dashboards in Power BI—skills that align directly with your needs for data visualization, statistical analysis, and understanding financial metrics. Additionally, my experience in ETL processes and collaborating with data engineers ensures I can design solutions that meet ALDI's objectives in a retail environment.

What draws me to ALDI Nord is your commitment to innovation and efficiency in the retail sector, combined with a modern work environment that supports hybrid models and professional growth. I am particularly enthusiastic about applying my analytical mindset and problem-solving abilities to uncover insights from commercial data, helping streamline operations and support your cross-functional teams.

I am enthusiastic about the possibility to relocate to Essen and join Aldi's dynamic team. I would welcome the opportunity to discuss how my expertise can add value to ALDI Nord. Thank you for considering my application. I look forward to the possibility of contributing to your team.

Warm regards,

Nallaperumal Krishnan
